WHOLESALE FLOWER SEED GROWERS

LOS ANGELES COUNTY EL MONTE CALIFORNIA, U. S. A.

•

CABLE ADDRESS: Registered
"Bodger El Monte" All Codes

Printed in U.S.A.

The attractive early California style building which houses our office force at El Monte.

Terms and General Conditions of Delivery

ALL SEEDS are quoted F.O.B. El Monte, California, for delivery after harvest crop 1940, 60 days net, less 2% cash 30 days. All invoices payable in U. S. dollars in or by New York or Los Angeles Exchange. All overdue accounts subject to sight draft without further notice.

Bags and containers will be charged at cost and are not returnable. There will be no charge made for bags smaller than the one pound size (5x7½ inches).

Prices quoted in this list go into effect immediately, superseding all previous quotations. **All orders of 4 ounces or over will be charged at the pound rate; all orders under 4 ounces will be charged at the ounce rate.**

We reserve the right to change any or all prices in this list without notice.

For every order, we agree to plant sufficient land to produce the desired quantity of seed under normal conditions.

In case of crop shortages, orders will be filled pro rata only.

Crop failure or any cause beyond our control releases us entirely from delivery.

We give no warranty, express or implied, as to description, quality, purity, productiveness, or any other matter of any seeds we sell, and we will not be in any way responsible for the crop. If seeds are not accepted on these terms, they are to be held subject to our order.

Should fulfillment of any order or contract be prevented or delayed by the act of God, war, blockade, revolution, prohibition of exports or imports, riots, strikes, lock outs, fire, loss and/or detention at sea or any other contingency beyond our control, we shall not be responsible for any loss and/or damage thereby.

BODGER SEEDS, LTD.

Shipping Information

Domestic: Time is important. Many of our customers use the Air Mail exclusively to save time and get the most possible out of our rapid order filling and delivery service. We suggest that you do the same. If your order is sent to us by Air Mail from the east coast it arrives the second day, is filled the same day it arrives and if shipped by Parcel Post seed will reach you within seven days from the time the order left your office. Correspondingly less time is needed when shorter distances are covered. For faster delivery, seeds shipped by Air Mail or Air Express will reach you within four days from the time your order is sent to us. For the greatest possible saving in time, send your order by wire to be shipped by air; seeds will arrive within two to three days from the time ordered.

Air express rates are calculated on the basis of half-pounds and distances are zoned. Air Mail is calculated on an ounce basis and goes as first class mail. Both speed up transportation immensely, and where time is a deciding factor, they certainly are the cheapest in the long run. Air transportation is safe, sure and economical.

Regarding rail shipments, both Parcel Post and Express will take 4 to 5 days to reach the east coast. When the shipment is over 10 pounds in weight it is cheaper to ship by express, but when it is less than 10 pounds, Parcel Post is cheaper. Parcel Post packages marked "Special Delivery" are given first class mail service and will go through practically as fast as first class matter.

Shipments of 75 pounds or over can be sent most economically by Freight. Package cars leave Los Angeles twice a week, arriving in Chicago the 7th morning and in New York the 10th morning. Contract orders and others placed considerably in advance of the time needed should be sent by Freight.

Foreign: We urge our foreign customers to use the Air Mails when sending rush orders. With the new Air Mail service across the Atlantic and the Pacific, there is a great saving in time, over and on both sides of the ocean. Air Mail letters are given preference over regular mail in all handlings.

When sending orders by cable, we suggest the use of our number code to cut down on words and expense. Five numbers in a unit may be sent for the cost of one word, a rate which reduces costs considerably.

Bodger Service Department

Novelties: The amateur gardener is novelty conscious, and it is easy to sell a new variety. Novelties are your logical sales leaders, and it is decidedly to your own advantage to make good use of them in your newspaper publicity, your advertising, and your counter features in the store. Make your selections from among the novelties listed herein and you cannot go wrong.

Transparencies: Our new colored transparencies are your busiest silent salesmen. They are accurately hand colored on translite film, printed from our regular photographic negatives. Placed in your store window, on the counter, along the walls with the seed racks, or near the cash register, they attract attention at once, and show your customer the actual flower of the seed you have for sale. Write us for full details regarding transparencies and the cabinets in which to display them.

Kodachromes: Our photographic department has recently assembled a very large collection of the small 135 millimeter Kodachrome slides which are available for the use of our customers for illustrating talks before garden clubs and other interested groups. If interested in the use of these Kodachrome slides, write us for full details and booking dates.

We are also equipped to photograph flower subjects in the larger professional size Kodachromes on order. We have a few 5" x 7" Kodachromes on hand at the present time. Write us if interested.

Electros: Believing that the day has passed when any average seedsman can afford to devote a full page or even a half page of space in his catalog to one subject, with this average seedsman in mind we have made practically all of our new electros and nickeltypes in a small size this season so that six, eight or even more subjects can be shown on a page. We believe this size, particularly in the colored electros, will prove popular with retail seedsmen. We call your particular attention to these inexpensive 1¾" x 2¼" color plates and to the large selection of new 1¼" x 1½" black and white electros contained in this list.

All electros we send out are unmounted unless the order specifies that they be mounted. There is an additional charge of 20% for this service. Since a majority of our customers prefer unmounted electros we have followed this policy, but will be very glad to have them mounted for any who so request.

Photographs: Through our Photographic Service we are able to furnish you with a complete line of first class photographs of novelty and standard flower varieties suitable for publicity and catalog purposes. Photographs will be submitted for approval upon request.

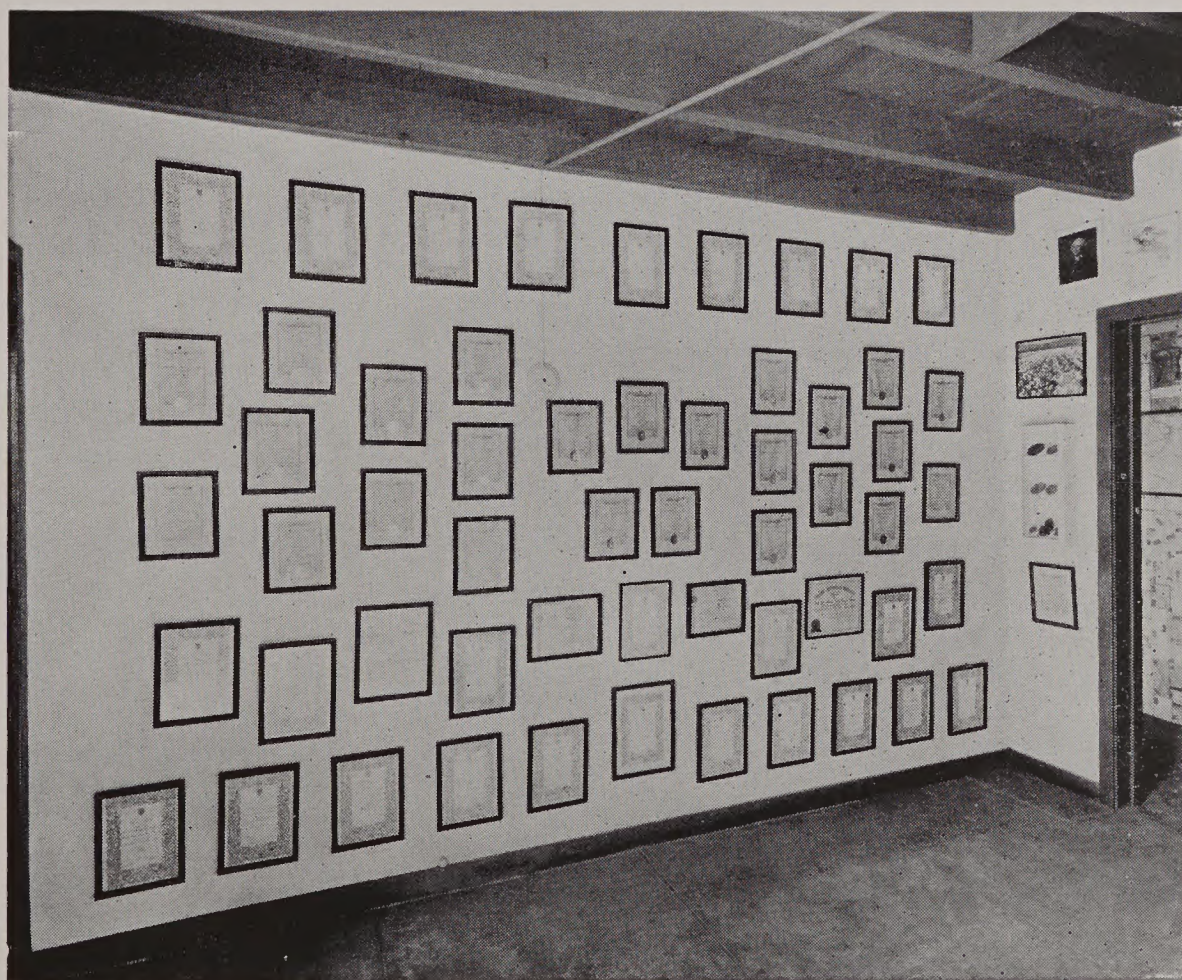

Bulletins: The most ambitious effort of our Service Department is the publication of a series of bulletins on various flower subjects. Bulletin No. 1, The Zinnia and Its Uses, Bulletin No. 2, Asters of Today, and Bulletin No. 3, Petunias, Past and Present, have been distributed; if you have not received copies, write us and they will be forwarded promptly.

Bodger Service Department

Horticultural Colour Chart: In certain sections of this catalog, we have added to the regular description of a variety some numbers and words in italics. These refer to color blocks in the Horticultural Colour Chart which many of our customers have secured either from us or from the Royal Horticultural Society direct. To visualize the exact color of the flower thus described, refer to your copy of the Colour Chart, turn to the page mentioned, mask the color block with the black mat provided and you will see the exact shade of the variety. For instance, Larkspur Stock Flowered Rosamond is described as **625** *shaded 623*. These page numbers will be found in the upper right hand corner of each sheet in bold face type. **625** is the predominating color of the bloom with a shading of color **623**. Larkspur Stock Flowered Rose Queen, similar to Rosamond, is described as **623/1** and **623**. These two color tones will be found on page 623, block **623/1** being a slightly lighter tone of the full color **623**, both of which very similar colorings are found in this variety. We have been able to compile fairly complete color recordings of several flower varieties. We believe that by this method you will be able to visualize the colors of the several varieties much more vividly than any word description can do.

All-America Awards: Winners in the All-America Selections Competition are designated in this list by the following symbols: (G. M.) Gold Medal; (S. M.) Silver Medal; (B. M.) Bronze Medal; and (H. M.) Honorable Mention.

All-America award winners are among the finest flower varieties. We hope you are featuring as many of these All-America winners as possible.

One wall of our trophy room, showing awards and medals granted to our flower seeds by Horticultural Societies in various parts of the world.

NOVELTIES & SPECIALTIES

**Marigold Dwarf
Gigantea Pot O'Gold**
No. 567—NICKELTYPES \$10.00

Marigold Dwarf Gigantea

Pot O' Gold (Bodger)

ANY HOME garden flower enthusiast will tell you that to be a favorite in her garden, a plant must be either very showy or fragrant or of exceptional size. A quick glance at favorite garden annuals will bear out the accuracy of this statement. Most flowers have one of these characteristics, very few all three. Marigold Dwarf Gigantea Pot O'Gold is one of those extraordinary plants which combine these three outstanding characteristics. A dwarf growing counterpart of our early introductions in the Gigantea type, Pot O'Gold is exciting even more favorable comment than its

predecessors. The plants are dwarf and compact growing, 12" to 15" in height, well branched, very neat in appearance and bearing a dozen or more of its large blooms at a time. The flowers are of the Gigantea formation, that is somewhat loosely formed, very full centered, with broad heavy petals gracefully overlapping, making a flower of great depth and beauty. Individual blooms are 4" to 4½" in diameter, and the color a most penetrating shade of bright deep golden orange (10/1). The strain is exceptionally early flowering, coming into bloom on our ranches about the 20th of June and continuing in bloom for 7 or 8 weeks. Not the least remarkable of its characteristics is the fact that Pot O'Gold is 100% double. Primarily a bedding subject for the garden, Pot O'Gold may also be cut for indoor use since the stems are 10" to 12" in length. A mass of intense dazzling gold, Pot O'Gold is truly a jewel found at rainbow's end.

We have just received word from a European customer, to whom trials of Pot O'Gold were sent last winter, that it is the earliest Marigold in his trials, coming into flower two weeks earlier even than Floribunda, generally considered earliest of the earlies. He pronounced Pot O'Gold also the finest variety he had seen.

No. 5052
Price per oz., \$2.55

Alyssum Violet Queen
No. 563—NICKELTYPES \$10.00

Alyssum Compactum Violet Queen

VIOLET QUEEN has been one of the most generally discussed of the newer flower varieties. All seedsmen when visiting our ranches have immediately on arrival asked to see it and have eagerly inspected our fields. That it is truly one of the most revolutionary developments in this flower group is readily acknowledged. Plants are dwarf, compact, neat in habit, free flowering, and the small sweetly scented flowers are a very rich, deep shade of violet. Violet Queen will unquestionably be one of the leading novelties of the season.

No. 1720 . . . Price per oz., \$.45 Per lb., \$5.00

Approximately 60,000 seeds per ounce.

Marigold Dwarf Gigantea Gypsy Jewels (Bodger)

LIKE ITS color variety counterpart Pot O'Gold, Gypsy Jewels is a colorful, very showy jewel-like adornment for any garden. Gypsy Jewels is a mixture of a wide range of brilliant colors including deep rich orange (10/1), dazzling golden orange (7), glistening golden yellow (4), canary yellow (5/1), lemon yellow (2/1), and primrose or sulphur (603). These jewel-like colors are embroidered in a pattern of entrancing beauty. The dwarf, compact, neatly formed plants, 12" to 15" in height, are extremely free blooming, bearing their 4" to 4½" flowers proudly displayed. The strain is exceptionally early blooming and continues in flower over several weeks. A few singles will be found as there are certain color lines that we have not yet succeeded in making completely all double. Fully 95%, however, will be doubles. Enjoy Gypsy Jewels in the garden and in bouquets for the home.

**Larkspur Giant Imperial
Pink King**

No. 566—NICKELTYPES \$10.00

Larkspur Giant Imperial

Pink King (Bodger)

SOME YEARS ago our Larkspur introduction Carmine King was history-making news in the flower world. Since the introduction of this first variety in the now well-known King or Bodger type Larkspur, we have followed up with White King, Coral King and Pink Perfection. This season we are presenting a variety worthy in every respect to join its predecessors in this famous King type. Pink King is a lovely soft, yet vibrant, shade of salmon rose (625/2 & 625/1), the color so much in demand by the cut flower trade. The fully double, 2" florets are composed of rounded broad petals which are evenly and closely spaced on the stems, giving that well known heavy Hollyhock-like cutting spike characteristic of the King type. Cutting spikes will be 24" or more in length, the straight stiff stems coming from low on the plants which reach a height of 5½'. The basal branched character gives several fine spikes of bloom on each plant. Pink King is one of the earliest flowering of all Larkspurs, coming in with the Stock Flowered variety Rosamond.

In growing Larkspurs in the garden outside, bear in mind that they are cool weather plants and for best results seed should be sown in the fall. In warm sections, such as Southern California, they are sown as early as August and in cold climates, good results have been obtained by sowing the seed broadcast in November in its permanent position in the garden where it will remain dormant until the ground warms in the spring and growth starts. If the winter is very severe, a light mulch covering should be applied. As Larkspur seed thrives on a chilling, best germination can be obtained by this method. Pink King grown in this manner will be a revelation in beauty.

No. 4520 Price per oz., \$1.30

Per lb., \$15.00

Approximately 8,000 seeds per ounce.

No. 1005—ELECTRO \$2.45**

Aster New Wilt Resistant Princess Type (Bodger)

OUR NEW Princess Type Aster provides a needed, new form for the cut flower grower. The blooms which are similar to the older Aurora type have a full crested center surrounded by several rows of strong guard petals. They are fine keepers and good shippers. Plants in the field are from 18" to 24" in height, but of course when grown under some shade would double this height. Stems are strong, of good length and the plants are free blooming. Flowers are from 3" to 3½" and the class is early flowering, coming in in mid-August with us. They are practically 100% wilt resistant.

Princess Anne. The well known peach blossom shade (28/3) opening delicate pink and turning rose pink as the flowers mature. Flowers are of good substance and heavy stemmed.

No. 820 Price per oz., \$1.70 Per lb., \$20.00

Princess Bonnie. A very beautiful soft salmon rose shade (625/2), with the center rich gold while opening. A luscious new color combination in Asters. The large blooms are freely produced on long stemmed plants which remain in good condition for two weeks or more. We predict a great future for Princess Bonnie both as a commercial cutting variety and a home garden favorite.

No. 824 Price per oz., \$1.70 Per lb., \$20.00

Princess Marsha. A strong, vibrant cinnabar scarlet (22 & 23), boldly contrasted with the rich gold center of the young flowers, similar in color to the older variety, The Clown. As the flowers open and mature, the golden center turns a silvery cinnabar. Princess Marsha brings an exciting new color note to the garden and is most effective in flower arrangements.

No. 822 Price per oz., \$1.70 Per lb., \$20.00

Approximately 12,000 seeds per ounce.

Aster Giant Harmony
Mixture
CUT No. 826

Aster Giant Harmony Type (Bodger)

THE HARMONY TYPE is an excellent non-resistant cutting strain. The large flowers have full double quilled rounded centers, surrounded by several rows of broad short guard petals. Plants are 2' to 2½' tall, with long basal branching stems, carrying 4" to 4½" blooms.

Moonlight. A beautiful, soft azure blue (636/2), high lighted by the gold of the center as the flower opens.

No. 876 Price per oz., \$1.70 Per lb., \$20.00

Morning Mist. Morning Mist is a sultry, mid-blue shade (636), two or three shades deeper than Moonlight.

No. 880 Price per oz., \$1.70 Per lb., \$20.00

Sunrise. Sunrise brings an entirely new shade to Asters, a very exquisite, delicate shade of apricot pink (623/3), with a rich apricot gold center. This is one of the pastel shades so much in demand by both the cut flower grower and the home gardener. Sunrise should go far.

No. 874 Price per oz., \$1.70 Per lb., \$20.00

Approximately 12,000 seeds per ounce

Stocks Double Giant Column Gardenia (Bodger)

AS LOVELY and elegant as the exotic Gardenia from which it borrows its name, this new Stock of ours is the crowning achievement of the plant breeder's efforts. With superbly formed, magnificent spikes composed of individual florets 2" to 2¼" in diameter, this remarkable new Giant Column Stock is indeed the last word in perfection for its class. Shimmering, glistening white, the flowers are the purest snow white of any Stock variety yet introduced. Producing only one flower spike to a plant, this spike will however be of enormous size, 12" to 15" of florets and nearly 3 feet in length, and 4" or even 4½" in depth, with the individual florets closely and compactly placed on the stem. The robust habit and uniformity of type combined with a high percentage of doubles places Gardenia definitely in a class by itself with no peer among the finer flowers for the high class florist trade.

No. 6816 Price per oz., \$6.80 Per lb., \$80.00

Approximately 19,000 seeds per ounce

Giant Art Shades
 No. 571—NICKELTYPES \$10.00

Poppy Nudicaule Gartford Giant Art Shades

THE NUDICAULE or Iceland Poppies become more interesting each season with the introduction of ever more beautiful varieties. This new Art Shades mixture is indeed an excellent strain with exceptionally fine large flowers, beautifully fluted and soft textured, carried on extremely long, heavy, wiry stems up to 30 inches in length which are produced in quantity on each plant. The color range includes lovely pastel shades of apricot, cream, gold, biscuit, pink, white and various shades of rose. While the Giant Art Shades is lovely in the garden, it is much more magnificent when used for cut blooms. When properly treated, that is if the ends of the stems are burned or dipped in hot water, flowers will last for several days. The new Gartford Giant Art Shades is truly a magnificent addition to the spring garden.

No. 5876 Price per oz., \$2.15 Per lb., \$25.00

Approximately 448,000 seeds per ounce.

Pansy Engelmann's Prize Strains

AFTER MANY years of careful study, we are convinced that the Pansies developed and sold by Mr. Carl Engelmann, of England, are the finest that can be grown by the American plant grower. We import this seed directly from the originator, so you may be sure of obtaining the same stock used by Mr. Engelmann in growing the plants which have won him coveted medals and awards at the great spring show at Chelsea each year. For your protection, we furnish this seed in packets sealed by the originator. We are exclusive wholesale distributors for this originator's seed in the United States.

Engelmann's Giant. This strain is very vigorous growing, compact and early flowering. It contains a great variety of shades, both dark and light, all of the blotched type, with very huge well-formed blooms. We recommend this strain for general use. No. 5342.

Engelmann's Special. The Special Strain is the old Scottish show type reselected to a strain of uniformly superbly well-formed, huge flowers. The colors are mostly bronze and reddish shades, many of them yellow bordered. Plants are extremely compact, very early blooming and vigorous in growth. No. 5340.

Primula Giant Malacoides

THIS MAGNIFICENT new Giant strain of Primula Malacoides, developed by a young hybridist in Pasadena, California, is the last word in excellence in this class. The strong robust growing plants make excellent pot plants, with extremely large well-formed, rounded flowers produced in abundance on heavy wiry stems rising from rich green foliage. The plants themselves are superb specimens, the colors of the showy large well-formed flowers most delightful and a well-grown mature plant will have from 30 to 50 spikes of lovely blooms.

Double Fairy Jewels. A lovely rich rose pink, slightly deeper in the center than in the outer petals (28/2 & 28/1). The double flowers have a crested center of 2 or 3 extra rows of petals appearing at first as a tuft, but later lying flat in double rows when the flowers are fully opened. Hundreds of $\frac{3}{4}$ " to 1" florets are produced on each plant. The strain comes 90% to 95% double from seed.

No. 6072 Large Trade Packets to retail at \$1.50 \$.75 each

Enchantress. A beautiful soft salmon rose (627/2), a color hitherto unknown in Primula Malacoides. Great quantities of the well-rounded, beautifully formed 1" florets are produced on each plant which will have 50 or more heavy stemmed spikes.

No. 6074 Large Trade Packets to retail at \$1.50 \$.75 each

Lavender Glory. Soft mauve lavender (630/2), with $1\frac{1}{4}$ " beautifully formed, abundantly produced florets, on strong robust plants.

No. 6078 Large Trade Packets to retail at \$1.00 \$.50 each

Snow Flake. Pure glistening white 1" florets adorning stately stems like glistening jewels sharply high-lighted by the lush green foliage.

No. 6076 Large Trade Packets to retail at \$1.00 \$.50 each

Mixture. Containing all the above single varieties and many others in the development stage. All with exceptionally large flowers and free flowering plants.

Zinnia Howard's New Giant Crested
No. 574—NICKELTYPES \$20.00

Zinnia Howard's New Giant Crested

Most recent development of the well known hybridist, Fred H. Howard

THE most recent of a long list of new flowers developed by the eminent hybridist, Fred Howard, of Montebello, California, is this Zinnia in whose distribution we are cooperating. Howard's New Giant Crested Zinnia is the result of many years' selection work on a strain produced by crossing the Dahlia Flowered and Scabious Flowered types. Quoting from the originator's description, the following facts are of interest: "The blossoms average from 4" to 5" in diameter, with a full rounded cushiony center surrounded by broad guard petals after the style of a *Pyrethrum Roseum*. The colors included in the strain are charmingly bright and fresh, and contain almost all known colors and shades of color to be found in this most popular of annual plants. Magnificent shades of orange, orange scarlet, yellow, rose, maize and crimson predominate. As a cut flower, or as an annual for garden ornamentation, they are without peer. For cut flower purposes, the effect of a bouquet of this gorgeous new strain is breath-taking and catches the eye at once, and they will undoubtedly become an important cut flower for florist use. The public is always looking for something new and in so far as inexpensive annuals are concerned, you surely have all the qualifications of appeal in this lovely strain." The type may be expected to reproduce 60% to 65% true to this large flowered crested formation.

No. 1500 Price per oz., \$2.15 Per lb., \$25.00

Approximately 2,800 seeds per ounce.

Petunia Grandiflora Single Fringed Theodosia

FOR A GOOD all around favorite garden annual, maintaining its popularity with the home gardener year in and year out, there is no finer subject than Petunia Theodosia. Developed and introduced many years ago, Theodosia has maintained and added to its popularity throughout the years. This of course is not through chance. Theodosia is one of the very loveliest Petunias one can grow, a most attractive shade of rich rose, highlighted by its deep open throat of molten gold. The beautifully formed flowers are of medium size, around 3" to 3½" in diameter, daintily fringed, giving the blooms an effect of frilly lace. The plants commence flowering when very small and continue to bloom freely throughout the summer weeks. Where an inexpensive, luxurious-looking flower is wanted, Theodosia has no peer.

Hollyhock Annual Indian Spring

Silver Medal **ALL-AMERICA SELECTIONS** 1939

Hollyhock Indian Spring
No. 565—NICKELTYPES \$10.00

INDIAN SPRING is one of the loveliest summer annuals, and blooming as it does the first year in less than five months after seed is sown, it is a flower for everybody's garden. A profuse bloomer, there is a colorful display of the semi-double, crinkly edged flowers for several weeks during the summer. After the first bloom is past, if the plants are cut back they will produce a second crop of blooms the same season. While rose pink predominates, variations will occur from a very light pink to an almost crimson rose shade. Normally 3½' to 4' tall, plants may grow as high as 6' in some sections. Indian Spring is well worth adding to the list of easy-to-grow annuals.

No. 4268 . . . Price per oz., \$.65 Per lb., \$7.50

Approximately 2,600 seeds per ounce.

Sweet Pea Spring Flowering Spencer Rose Pink

Silver
Medal

ALL-AMERICA SELECTIONS 1940

ROSE PINK is one of the most attractive colors in the new Spring Flowering Spencer Sweet Pea class. This new type matures between the Early Flowering and Late Flowering classes, forces very well, with later and more flowers, and longer heavier stems and taller plants than the Early. Grown outdoors it is very free blooming, exceptionally heat resistant, coming into flower ten days or so earlier than the Late Spencers. The color is a beautiful clear rose pink on a white ground, a shade between Early Spencer Giant Rose and Shirley Temple. Flowers are large, wavy and much more fragrant than other Spencer varieties.

Marigold Harmony Type French Dwarf Double Harmony Hybrids (Bodger)

THIS EXCELLENT new Marigold Harmony Hybrids, selected from the popular variety Harmony and embodying all the fine features of Harmony, combined with a wide and varied color range, has recently been developed by our plant breeding staff. The compact plants are 12" to 14" in height, 100% all double, and flowering commences about 2½ months after seed sowing, one of the earliest of all Marigolds. Flowers are of medium size, averaging 1¾" in diameter, and do not have the strong Marigold odor. The color range includes the popular Harmony, our new Spotlight, a lovely golden orange shade, a distinct golden yellow and innumerable blotched and striped combinations of golden orange with maroon, and various shades of golden and lemon yellow with the contrasting dark maroon. Flowers have the familiar crested center flanked by several rows of broad guard petals.

Calendula Campfire Bodger's Improved Florist Strain (Bodger)

AMONG ALL Calendula introductions, our novelty of several years ago, Campfire Bodger's Improved Florist Strain, maintains its place among the leaders. The color is well known, a very deep strong orange with a distinct scarlet sheen on the upper side of each petal. While the center is light, it is scarcely ever noticed because of the complete doubleness of the flower. Blooms are flat across the top, the type demanded by the florist trade, and measure at least 4" in diameter. The plants are strong growing and even in habit, with exceptionally long, heavy cutting stems produced in generous quantity on each plant. Ideal for florist use, Campfire Improved is also popular with the home gardener.

**Calendula Campfire Bodger's
Improved Florist Strain**

Marigold Harmony Type French Tall Single Ferdinand (Bodger)

SAUCY, sprightly and colorful, Ferdinand is one of the gayest of our new flowers. Unlike its companions in our new Harmony Type group, Ferdinand

Marigold Ferdinand
No. 559—NICKELTYPES \$20.00

is single flowered with a neat round, crested center of dainty tubular florets in an arresting shade of golden yellow (5) surrounded by a single row of broad, mahogany-red guard petals. While the flowers are of only medium size, 1½" to 1¾" in diameter, they are extremely showy and attractive. The plants are tall growing, 20" to 24", with an upright, semi-compact, yet full foliated growth habit. Stems are well over a foot in length, making Ferdinand a fine new cut flower subject as well as an attractive and showy garden plant. Like all of the Harmony Type Marigolds, Ferdinand is early blooming, commencing to flower within three months after the seed is sown, and does not have the strong Marigold odor.

Petunia Hybrida Topaz Rose

**Bronze Medal
1938**

ALL-AMERICA SELECTIONS

ONE OF the most vividly colored of the rose Petunias, Topaz Rose has been a strong favorite with all gardeners ever since its introduction. The color is a fiery rose, delicately suffused with gold, strongly contrasted with the topaz throat. It is extremely free blooming, providing a brilliant patch of color throughout the season.

Petunia Giants of California Bodger's Supreme Florist Strain (Bodger)

ONE OF the most striking sights on our Lompoc growing grounds has been a large planting of our remarkable new Giants of California Petunia Supreme Florist Strain. Outstanding in its beautiful coloring, the flowers are in shades of pink, rose and salmon rose, all with light, richly veined throats, and many of them striped or combining two or more rose shades in one bloom. The blooms are unbelievably large, 5" to 7" in diameter, with shallow open throats surrounded by satiny petals which are so heavily ruffled that in the young flowers they are easily mistaken for doubles. As the flower fully matures, the petals fold back in a wider radius leaving the beautifully veined throat exposed.

**Petunia Giants of California Bodger's Supreme
Florist Strain**

No. 560—NICKELTYPES \$20.00

These huge, strikingly beautiful flowers are freely produced on strong growing, richly foliated plants, which will be 1½' to 2' tall by the end of the season, although the first flowers are produced when the plants are only 5" or 6" tall. As a subject for pot sale by the florist, this is an excellent strain since the first large flower is produced comparatively early before the plant makes any appreciable growth. It is an excellent bedding variety as well as a fine window box type. Dealers who have handled this strain declare they could not satisfy their particular clientele without it.

Zinnia Super Crown O'Gold Pastel Tints (Bodger)

THE Pastel Tints Mixture in our new improved Crown O'Gold type is winning more and more enthusiastic boosters every day. All visitors to our ranches exclaim and enthuse over this Zinnia above all others. They agree with us that this is the very finest large flowered Zinnia introduction since the original Dahlia Flowered. Flowers are large and showy, 5" to 5½" in diameter, midway between the Dahlia Flowered and California Giant as to type, combining the ruggedness of the Dahlia Flowered with the soft effect of the California Giant. Strictly a mixture of pastel tints, it contains a wide range of pastel shades, including soft yellow, old gold, light pink, apricot pink, various shades of salmon, peach and buff, lively cerise salmon, as well as pure white and cream. All of the flowers carry the characteristic Crown O'Gold markings, that is, each petal of the flower is overlaid at the base with a deep golden yellow while carrying out the individual flower color at the tip. Delightfully soft, yet colorful for garden decoration, it is unexcelled for cutting among the larger flowered Zinnias. The plants are strong and robust, growing about 3' tall, and the flowers are borne profusely throughout the season, first appearing about 60 days after seed is sown. A warm sunny location with plenty of water applied by the trench method will give best results with this as well as any other Zinnia.

No. 1330

**Verbena Hybrida Grandiflora
Brightness**
No. 573—NICKELTYPES \$10.00

Verbena Hybrida Grandiflora

Brightness (Bodger)

AS THE name suggests, this variety is a particularly vivid color, a bright rosy, cerise scarlet (20 shading to 20/1), boldly contrasted with the large white eye. Individual florets are about $\frac{7}{8}$ " in diameter, while the flower heads measure $2\frac{1}{2}$ " to $2\frac{3}{4}$ " across. The plants are semi-compact in habit, with a spread of 15" to 18", making an excellent variety for border or edging use.

No. 7942 Price per oz., \$1.30 Per lb., \$15.00

Approximately 12,500 seeds per ounce.

Nierembergia Hippomanica (Dwarf Cup Flower)

OF ALL the hundreds of new flower introduction which have come under our observation during the course of the past few years, none has caused so much comment from visitors to our farms as this little Dwarf Cup Flower, Nierembergia Hippomanica. With the possible exception of Zinnia Linearis, it will outbloom any flower we have growing. It starts flowering when the plants are only about two inches tall, that is about 15 weeks after the seed is sown, and keeps on right up until the heavy frosts of late fall. It is at all times neat and tidy looking, the young flowers coming and covering the older flowers and seed pods. The lovely lavender blue shade, heightened by a touch of yellow in the center, is most charming. Plants are definitely dwarf, compact—streamlined, if you will—not over 5" or 6" tall, and with a spread of only 8" to 10". Foliage is light gray green, very inconspicuous, and there are literally hundreds of flowers in bloom at a time throughout the summer. As an edging plant, for the border along a walk, or to outline beds of larger flowers, it has no equals, while for use in the rockery, it is unexcelled and is extremely lovely in a window box or in flower pots. It is a half hardy perennial which will winter over if given some protection. In the southern warmer sections, no protection will be necessary. The plants should be cut back at the end of the season and will send out fresh growth in the early spring.

ASTERS *a*

LARGE FLOWERED, HEAVY STEMMED, SPECIAL FLORIST VARIETIES

EARLY GIANT WILT RESISTANT *f* (Bodger)

The finest large flowered, heavy stemmed wilt resistant Aster yet developed. Flowers are of the large Giants of California type, while the plants are less tall, about 1½' in height, with strong heavy stems. This class is early blooming, coming into flower four to six weeks earlier than the Giants of California, that is during early to mid August. An exceptional new class.

SUPER GIANT *f*

This is the largest and most fully double Aster class known. The flowers are from 6" to 8" across, with full petaled, graceful, interlacing petals. Plants are about 2½' tall, with six to eight long, non-lateral stems per plant.

20	El Monte (Bodger) (B.M.,A.A.S.'36), crimson.....	1.05	12.00
26	Los Angeles (Bodger) (S.M.,A.A.S.'34), shell pink.....	1.05	12.00

EARLY CALIFORNIA GIANT *f* (Bodger)

A new early blooming strain of the Giants of California Aster. The flower size and form are the same as in the later blooming group, while the plant habit resembles the Beauty class, with branching beginning rather high on the main stem, the flowers being borne erect. Blooming commences a week or more earlier than in the late class, or about the end of August under our conditions. We very highly recommend the new Early California Giant Asters for short season districts, or wherever a large flowered type is wanted early in the season.

ASTER WILT AND WILT RESISTANCE

The so-called wilt disease of Asters is caused by a specific parasitic fungus, which may attack the plant at any stage in its growth from the seedling to the seed-producing age. The spores of the fungus may be carried on Aster seed and on inert matter with the seed, on the implements used in preparing the soil, and in the soil itself. When once introduced into the soil, it persists indefinitely and makes the land "aster sick," that is, whenever an ordinary strain of Asters is planted into that particular soil at any time thereafter, the wilt fungus living in it will attack the plants and they will die off at some stage of their growth.

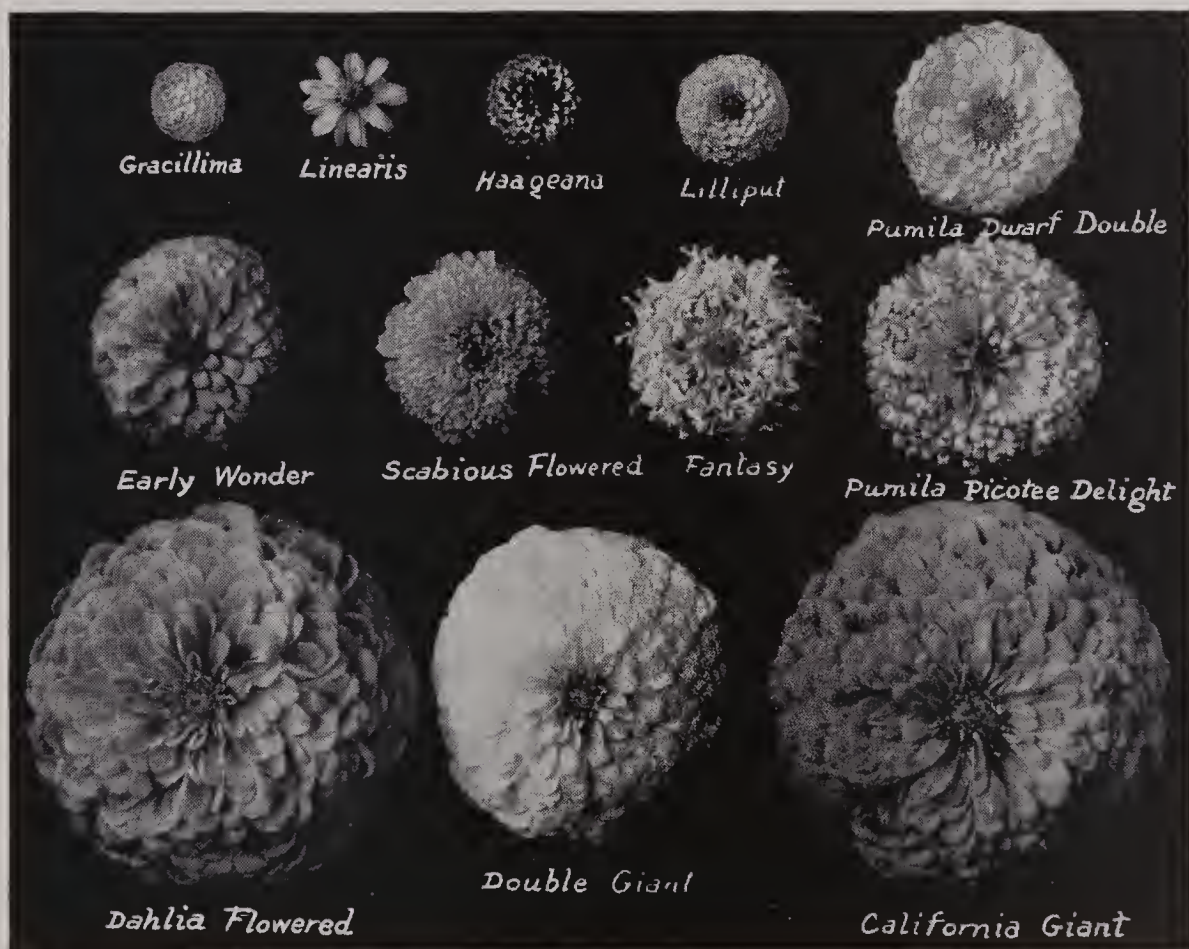

A wilt resistant strain of Asters, however, is one which, although planted on the very sickest soil available, will withstand the attacks of the fungus and develop into strong, healthy plants. Just as some people or animals withstand the attacks of certain diseases, while others become sick at the first sign of an epidemic, so the resistant strains of Asters will withstand the attack of the wilt fungus, while the non-resistant strains will succumb.

See our Bulletin No. 2, Asters of Today, for full details on Aster diseases and culture.

ZINNIAS*_a

We have been Zinnia specialists for many years, taking the lead in their development ever since our first outstanding Zinnia introduction, the Dahlia Flowered strain, which was rightly named a New Flower for the People. This type, developed in our experimental department and introduced by us in 1919, was the turning point which changed completely the status of the once unpopular Zinnia family. Since this time, we have developed and introduced many new types and varieties in the now extremely popular Zinnia group. Many additional varieties are in the process of development in our Zinnia workshop and will be presented within the course of the next few years. See our Bulletin No. 1, The Zinnia and its Uses, for full details on Zinnia Types and Culture.

TALL, LARGE FLOWERED TYPES

BODGER'S GOLD MEDAL DAHLIA FLOWERED *f* (Bodger) (G.M.,R.H.S.'24)

The Dahlia Flowered strain was introduced by us in 1919, and all the colors have been of our introduction at various times since then.

The plants are of medium height, 2½'-3', very robust, bearing many strong stems of the fully double, huge flowers which resemble the show type of Dahlia. We have marked the most popular varieties with an asterisk (*).

	Per oz.	Per lb.
1260 *Canary Bird, rich canary yellow.....	.35	3.50

DELPHINIUM PACIFIC GIANTS *pf* (Vetterle and Reinelt)

Remarkable new strain developed by Vetterle and Reinelt on the Pacific Coast. Flowers extremely large and well formed, 2½" to 3½" in diameter, symmetrically spaced on well balanced spikes of thin woody stems, practically 100 per cent double. This strain is comparatively mildew resistant. Seed we have to offer includes seed produced by the originator as well as these same varieties and a mixture of our own growing produced from the originator's stock seed.

BRIEF CULTURAL NOTES

ZINNIAS: Zinnias are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost has passed. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3" or 4" tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for several hours so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture. By this method you will have to water Zinnias only once every two weeks or so, whereas if the ground is merely sprinkled, you will have to repeat the sprinkling every other day or so. Irrigation not only gives a stronger, healthier plant, but also saves on your water bill.

CALENDULAS: Calendulas are definitely cool weather loving plants and in the warmer climates should be sown in the autumn for early bloom in the late winter or early spring. While they like full sun, they cannot stand the burning sun of summer. In colder climates, seed should be started in the cold frame and plants set out as soon as possible for late spring and early summer bloom. In planting Calendulas, be sure and choose the proper type for the use you have in mind. There are forcing varieties for greenhouse growing and garden varieties for outdoor growing. The outdoor varieties make a sturdier, more compact growth and are very desirable for garden use, while the forcing varieties are developed especially for the cut flower trade and do best under greenhouse conditions.

GODETIAS: In their native California, the Godetia seeds on the hillsides sprout with the first winter rains and grow during the cool, wet winter months and come into flower during late spring, hence their name, Farewell-to-Spring. Given similar treatment in the garden, they will give their best bloom. Sow the seed broadcast late in the fall and allow them to remain undisturbed during the winter months. In the spring they will grow quickly as the soil warms and bloom profusely during late spring. Best results will be obtained by this method as they cannot tolerate the very strong summer sun.

GOURDS: Gourds should be sown where the plants are to remain and should not be planted until late in the spring after the soil is thoroughly warm and nights as well as days are warm. For best results sow in a warm, sandy location, somewhat on the dry side. Provide enough water for a normal growth until the flowers appear, after which no further irrigation should be necessary. Watering during the flowering period will cause dropping of flowers and buds, and consequent loss of Gourds. For perfect-shape specimens, vines should be trained up on a fence or trellis and the Gourds allowed to hang, thus assuring straight necks and preventing rotting or discoloration from the soil. Do not harvest the Gourd crop until the fruits are thoroughly matured. This will be when the stem becomes brown and hard and pressure with the fingernail cannot dent the shell of the Gourd. After picking, Gourds should be hung in an airy, dry place until thoroughly cured. The large, hard-shelled varieties are then washed and scrubbed before decorating. The small, colorful varieties are wiped clean of dust and given a light coating of varnish or shellac. If thoroughly dried before treatment, Gourds should last several months for house decoration.

IPOMEAS: In growing Ipomeas, never plant until the soil is thoroughly warm. If it is too cool, the seeds will rot instead of germinating. Even in such warm sections as Southern California, seed should not be sown until late May. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage. Heavy watering will stimulate foliage growth at the expense of flowers. A poor soil is preferable to a rich one and fertilizer should not be used as this will promote heavy foliage which will hide the flowers. Ipomeas show off to best advantage when planted against a wall, fence or trellis.

LARKSPURS: Larkspurs are cool weather plants and for best results should be sown in the fall. In warm sections, such as Southern California, they are sown as early as August, broadcast where they are to bloom and if for the cut flower market, are sown thick like radishes and the entire plant pulled to go to market. For the home garden, on the other hand, plants are thinned out to the proper distance and allowed to branch normally for a more brilliant show of color. In the colder sections, seed should be sown broadcast in November in its permanent position in the garden. If very severe, a light mulch covering should be applied. Seed will, therefore, remain stratified and dormant throughout the winter months and with the spring thaws and first warmth will germinate and commence to grow. As Larkspur seed requires a chilling for best germination, this is the ideal treatment for best results.

MARIGOLDS: The African Marigolds are strong feeders requiring plenty of water. This type should therefore be planted in the richest, most favorable section of the garden. Seed may either be sown where the plants are to flower or can be started early in a seed bed and the seedlings set out to their permanent position later on. They transplant very readily. French Marigolds on the other hand are very light feeders and require a very small quantity of water. Too strong feeding and too heavy watering will throw them into foliage growth with a great scarcity of flowers. For a free-flowering, colorful plant, select the poorest soil, keep the plants on the dry side and do not fertilize. Seed may be sown where the plants are to flower or seedlings can be transplanted from the seed bed although better results will probably be obtained by sowing in place. Marigolds are fairly hardy and should be started early in the spring.

PETUNIAS: The chief pitfall the amateur runs up against in growing Petunias is in the seed sowing. Almost invariably they bury the tiny seeds so deeply that the sprouting seedlings cannot possibly fight their way to the surface. Petunia seed must be sown with the very utmost carefulness. A seed flat or a seed pan should be used, a light, loamy soil carefully prepared, properly moistened and finely screened, the box filled to within a half-inch of the top with ample drainage on the bottom and tamped down firmly, smoothly and evenly. Then the seed should be mixed with about a teaspoonful of sand and this mixture of seed and sand sprinkled carefully and thinly over the surface of the seed box. A very fine sprinkling of pure sand, not more than $\frac{1}{16}$ of an inch, may be used on top of this mixture or it may be left without any further covering. A pane of glass or a damp burlap sack or folded newspapers should then be placed over the flat and left there until the seeds begin to sprout. Immediately after the first sprout appears, this heavy shading must be removed and a single layer of gauze substituted. If the soil has been properly moistened when it is being prepared for sowing, it will not have to be watered again until the seedlings have developed their third and fourth leaves. If the soil appears to be drying out, however, water is to be applied with a very fine-spray hand bulb, or better still, the pan or flat placed in a tray of water to allow moisture to soak upwards from the bottom. Always leave the seed box in a well-ventilated place, but without any draft, to prevent damping off. When the seedlings are large enough to handle, they should be pricked off into a second flat or small pots for a few weeks before setting out in their permanent position in the garden.

SCABIOSAS: While the annual Scabiosas will bloom during the summer, they do so much better in the early spring than during the hot summer days, that every effort should be made to start the seed in the early fall in warm sections or in cold frames in early spring in the more northerly sections. In warm sections, such as Southern California, plants will winter over perfectly well and produce extremely early flowers the second year. Scabiosas enjoy full sun and will thrive in any good garden soil.
